

Bitpalast® “News” web design module

Integrating up-to-date news into your website should be a quick and straightforward process. Untrained staff and interns should also be able to edit and publish news without extensive training beforehand.

The Bitpalast® “News” web design module enables you to manage your latest company news directly in your browser. First of all visitors to your site see a summary of all news items on an overview page. You can define the content of the summary as you require. The complete news item is only displayed when the visitor clicks “More ...” etc.

Publishing news is easy: you type the summary and the full texts into a user-friendly form, or copy them there from another program. Then you click “Save!”. Done. You can also use text formats, such as colors, bold, or hyperlinks. The sequence of the news items can be set via a sorting key, meaning that the newest items are always at the top of the page, for instance. All news items and their summaries are seamlessly integrated into your existing website. You need neither HTML expertise, a web editor, nor a content management system to edit your news items.

The Bitpalast® “News” web design module includes:

- ✓ Staging of a MySQL™ database¹ for administration of the text data
- ✓ Free-of-charge MySQL™ database for text data maintenance for the duration of your web operation at Bitpalast®.
- ✓ Templates for designing summaries and full-text news items to match the look of your website
- ✓ Extremely easy-to-use interface for managing news items
- ✓ Free technical support from personally designated Bitpalast® technicians

For customers within the EU, the prices do not include VAT. Offer only good for businesses outside Germany with an EU VAT ID.
