

## Bitpalast® Hosting Reservation Server

**NEW!!!**  
**Hotel-Mode**  
 incl. booking schedule  
 for room reservations  
 & overnight stays

The Bitpalast® Hosting Reservation Server enables quick and easy scheduling of resources such as hotel rooms, camping sites, conference rooms, leisure facilities and vehicles. A resource can be reserved by your clients and staff members. Other clients and staff members see the booking schedule and can reserve free periods for themselves. You can define whether your users can see other users' personal data or whether only an administrator is able to see who has reserved the resource (this is ideal for events management such as lane reservations at bowling alleys).

The screenshot displays the 'Online Scheduler' web application. The main interface shows a calendar for August 2004, with a detailed view for the week of August 22nd to 28th, 2004. Below the calendar, there are buttons for 'My Reservations', 'My Past Reservations', 'Other Reservations', 'Other Past Reservations', and 'Blacked Out Time'. A table below shows reservation slots for various resources like 'Basket Ball Arena 1', 'Tennis Court North', 'Tennis Court South', and 'VIP Lounge'.

An inset window titled 'New Reservation - Microsoft Internet Explorer' shows a form for reserving a 'VIP Lounge'. The form includes fields for 'Location' (Hamburg), 'Phone', and 'Notes'. It also has a section for 'Please select the starting and ending times:' with a date of 08/23/2004, a start time of 08:00, and an end time of 08:30. There are fields for 'Minimum Reservation Length: 10 minutes' and 'Maximum Reservation Length: 2 hours'. A 'Will be reserved for:' section contains fields for 'Name' (Monika Muster), 'Phone' (12345), and 'Email' (test@bitpalast.de). A 'Summary' section is also present. The form has 'Save' and 'Cancel' buttons. At the bottom, it says 'Bitpalast® Reservierungssystem v1.0.0 RC1'.

You can freely define the name and location of the resources. You can combine several similar resources in a group. When the last item of the group has been reserved, no more of these resources can be booked (until at least one item of the group is freed up again). You can specify which resources individual users can book and which they cannot. The Bitpalast® "Reservation" module includes:

- ✓ Comprehensive, easy-to-use online reservation system: Any resource type (e.g. tennis courts, bowling lanes, hotel rooms, conference rooms, boats, vehicles etc.), user management including registration and authorization of individual users for certain resources, one-off and automatic recurring reservation options (e.g. "every Monday from 4 to 5 pm"), automatic e-mail notification (e.g. reservation and registration), double-booking safeguard, freely configurable off-time, minimum and maximum reservation times, calendar with time and date, and overview of booked/ free times, booking statistics, mass e-mail user notification, read-only access, administration access and much more...
- ✓ Maintenance via web browser, can be used from anywhere and by a virtually unlimited number of users at the same time.
- ✓ Available in English, German, French, Italian, Dutch, Portugese & Suomi. Can be translated into any additional language. Every user can select his preferred language upon login.
- ✓ Webserver including a dedicated domain, database & e-mail system, unlimited number of reservations possible
- ✓ Free technical support by personally dedicated Bitpalast® consultants
